SRINADH KODALI

Dickinson, ND 58601 | srinadhkodali9@gmail.com | (313) 265-9118

PROFESSIONAL SUMMARY

Applied agronomist and plant scientist with a Ph.D. and experience in crop production, soil fertility, nutrient management, soil–water–plant relationships, and field research in the Great Plains. Experienced in coordinating multi-year and multi-location experiments, irrigation scheduling, field sampling and operations, statistical analysis, and producer-facing research communication. Current Postdoctoral Research Fellow at NDSU Dickinson Research Extension Center.

RELEVANT SKILLS

Applied agronomic research • Irrigation scheduling and soil moisture monitoring • Crop and fertilizer management • Field trial design and implementation • Plot operations and harvest coordination • Soil, plant, weather and yield data • R and SAS • ANOVA and mixed models • UAV and satellite remote sensing • GIS (ArcGIS Pro, QGIS) • Field-day presentations • Research writing • Student mentoring

EDUCATION

Ph.D., Biological Sciences (Plant Science) | South Dakota State University | May 2026

M.Sc., Plant & Soil Science | Texas A&M University–Kingsville | December 2020

RESEARCH AND TEACHING EXPERIENCE

Postdoctoral Research Fellow | NDSU, Dickinson Research Extension Center | 2026–Present

- Conduct applied field research on crop nutrient management and cropping systems relevant to western North Dakota and the northern Great Plains.
- Evaluate nitrogen and sulfur fertilizer rates and sources in canola, including crop response under varying soil and environmental conditions.
- Coordinate field trial layout, treatment implementation, sampling, field operations, data collection, and harvest activities.
- Integrate soil, crop, weather, yield, spatial, and remote-sensing data to interpret agronomic response and support field-scale management decisions.
- Collaborate with research and Extension personnel and communicate research findings through plot demonstrations and agricultural presentations.

Graduate Research Assistant | South Dakota State University | August 2021–May 2026

- Led multi-year, multi-location research on soil health, nitrogen management, interseeded cover crops, nutrient cycling, and crop performance under variable moisture and fertility conditions.
- Managed and analyzed datasets from 20+ field sites and 7+ growing seasons using R, SAS, ANOVA, mixed models, multivariate statistics, and structural equation modeling.
- Coordinated irrigation scheduling, equipment operation, sampling, field logistics, and research activities with farmer-partners and multidisciplinary teams.
- Integrated soil moisture sensors, weather data, UAV and satellite imagery, and soil and plant measurements to investigate soil–water–plant relationships.
- Presented research at field days; contributed to scientific publications and grant-funded research; mentored students and research personnel.

Graduate Teaching Assistant | Texas A&M University–Kingsville | September 2018–December 2020

- Supported classroom, laboratory, and field instruction in soil science and crop management.
- Developed practical demonstrations and learning materials on soil moisture, crop management, and soil–water–plant relationships.
- Mentored 10–12 students per semester and supported laboratory equipment setup and safety procedures.

Kodali, S., Flores-Lopez, C., Lobdell, I., Kim, B., Russell, J. C., Michna, L., & Turner, B. L. (2024). A Case of One Step Forward and Two Steps Back? An Examination of Herbicide-Resistant Weed Management Using a Simple Agroecosystem Dynamics Model. Systems, 12(12), 587. https://doi.org/10.3390/systems12120587

Medrano, E. G., Schuster, G. L., & Kodali, S. (2021). Response of commercial cotton varieties to Xanthomonas citri pv. malvacearum at early developmental stages in South Texas. Research Journal of Plant Pathology, 4(4), 01.

Turner, B. L., & Kodali, S. (2020). Soil system dynamics for learning about complex, feedback-driven agricultural resource problems: model development, evaluation, and sensitivity analysis of biophysical feedbacks. Ecological Modelling, 428, 109050. https://doi.org/10.1016/j.ecolmodel.2020.109050

EXTENSION AND OUTREACH

Delivered field-day presentations on cover crops, nitrogen management, soil health, and crop-production research (2022–2024); used research plots to explain treatment effects and practical implications to producers and agricultural stakeholders.
